Care & Maintenance

Quartz Countertops

Thank you for choosing quartz countertops from DDN! With proper care, your surfaces will stay beautiful and durable for years to come.

Daily Care & Cleaning

- Use a **soft cloth or sponge** with mild soap and warm water for everyday cleaning.
- Dry with a soft towel or microfiber cloth for a streak-free finish.
- Avoid abrasive pads, harsh chemicals, or bleach-based products.

Dried Spills & Stubborn Messes

- For dried-on spills, a **hot damp cloth** is usually enough to loosen and wipe them away.
- If necessary, use a plastic razor blade scraper (the kind used to remove stickers from windows). Keep the blade at no more than a 45-degree angle—never straight up and down—to avoid scratching the surface.
- Avoid metal or plastic putty knives, which can leave marks on quartz.

Avoiding Stains

- Quartz is non-porous and highly stain-resistant, but it's best to **wipe up spills quickly**, especially coffee, wine, oils, vinegar, and citrus.
- Stick to **gentle cleaners**—avoid powdered abrasives like Bar Keepers Friend®, as they may dull the surface if misused.

Heat Protection

- Quartz is heat-resistant, **not heat-proof**.
- Always use hot pads or trivets under pots, pans, crockpots, air fryers, and similar appliances.
- Sudden or prolonged heat exposure can cause discoloration or cracking.

Scratch & Chip Prevention

- Always use a **cutting board**—never cut directly on your countertop.
- Avoid dropping heavy or sharp items, especially near edges and corners, which are more vulnerable to chips.

What to Avoid

- No **harsh chemicals** like oven cleaner, drain cleaner, paint remover, or nail polish remover.
- Avoid **scouring pads, steel wool**, or anything abrasive.
- Do not use quartz as a step stool or work surface—excessive pressure or weight can damage the countertop.

Polishing & Sealing

- Quartz requires **no sealing or waxing**—ever.
- The surface maintains its shine with basic cleaning.
- If you'd like an occasional shine boost, use a stone-safe spray polish, but it's not necessary.
