

CABINETY CHECKLIST

USE THIS CHECKLIST TO ENSURE YOU HAVE A SMOOTH PROCESS FROM START TO FINISH.

BEFORE YOU CALL US OUT TO MEASURE, ANSWER THESE QUESTIONS:

- Have you chosen your cabinet color? Countertop color? Countertop Material? Thickness (2cm or 3cm)?
- Have you decided on all the areas that are getting new cabinets or countertops?
- Have you figured how high you want your backsplash to be?
- Have you chosen sinks?
- Have you chosen faucets? Faucet hole layouts (air gap location, sprayer, etc.)?
- Have you figured out who will be removing the existing tops? Existing cabinets?
- Have you figured out which corbels/brackets to use for counters that hang out over eight inches?
- Have you figured out how far up to the ceiling you would like your upper cabinets to go?
- Have you chosen your drawer and door knobs or pulls?
- Have you chosen all appliances that could affect the new layout?
- Have you considered a plan of action if water damage is found upon removal of existing cabinets?

NOTE: We recommend demoing your own cabinetry. There is a high risk of water damage, plumbing damage and/or other problems being found or created upon demolition. Having DDN demo cabinets may cause unexpected delays if such damage is found or created.

BEFORE DAY OF MEASURE:

- Please have On-Site Personnel ready for time of measure to assist with questions.
- Please Completely Clear off your Countertops and all areas being measured.
- Please have corbels in place so we can assure sizing and weight capacity on overhangs, if needed.
- Please have any provided sinks and faucets on site during measure, we may bring them back to our shop to create the perfect fit.
- Please have unit or home unlocked or provide us lockbox code for access.

BEFORE DAY OF DEMO / INSTALL:

- Please have all sink plumbing unhooked before we arrive, and make sure any leaky valves are replaced or repaired before we arrive.
- Please disconnect all appliances and electrical equipment and remove them from the working area.
- Please have the unit or property vacant during installation if at all possible and have all children and pets as far away from the working area as possible, if on-site.
- Please leave as much space as possible in the working area, as well as making sure all walking areas are cleared of clutter. We understand your concerns for installers to remove their shoes in your home, but we are unable to do this as it puts our workers in danger. We will use shoe protectors if you so choose or moving blankets on the floors if you prefer.
- Please understand that demolition WILL cause unexpected damage. If we are doing your demolition, we will do our best to make sure nothing is being damaged, but small dings or scrapes do happen. Be ready to expect some small damage.

AFTER INSTALLATION:

- Please do not use countertops or place any heavy objects, including sitting or standing on the tops for the first 24 hours after installation. This time is for the epoxy to cure completely, failure to do so can shift the tops out of place, or cause caulking to come apart and become dirty.
- Please take note of our Care and Maintenance Guides to best care for your new counters.
- Simple Soap and Water does the best at removing daily messes on all types of counters.
- Always use trivets or hot pads before placing hot objects on your counters for long periods of time.
- Scrapes or dings can occur with hardwood cabinetry, so to repair these yourself, a Wax Touch Up Pen in the appropriate color will be able to fill in any small scratches, scrapes or dings that may happen later on. You can find these at any home improvement store.
- To best clean and maintain your new cabinets, a damp cloth or basic household cleaner will be able to easily remove any food messes or dirt that may build up. Do not use abrasive cleaners or acidic cleaners, including Acetone, as these substances may remove the veneer color and finish.
