WHAT IS ACRYLIC?

Acrylic countertops are a type of solid surface countertop material made from a combination of acrylic polymers, minerals, and pigments. Because of its physical properties, acrylic seams are inconspicuous, scratches are easily repairable, and the material is cleanable with just soap and water.

Photos and samples reflect small portion and typical pattern of full acrylic sheet. Physical sample best represents material. Final acrylic sheet may vary in color, pattern, chip size, etc.. Please contact us for more information.

WHY ACRYLIC?

- \$** High-end look without the quartz or granite cost.
- No particleboard MDF substrate. Acrylic is a solid material.
- Food-hygienic and bacterial resistant. Used frequently in hospitals.
- Great for: Countertops, Window Sills, Shower Surrounds and more.

Photos and samples reflect small portion and typical pattern of full acrylic sheet. Physical sample best represents material. Final acrylic sheet may vary in color, pattern, chip size, etc.. Please contact us for more information.
